

MILAN GABRIEL

Senior Data Engineer & Solution Architect - Cloud Data Platforms at Scale

milangabrielmacwan@gmail.com | +91-973-708-0177 | linkedin.com/in/milan-gabriel | Portfolio | Remote
(EU/UK/US)

Summary

Data engineer and solution architect with 10+ years designing, owning, and scaling cloud data platforms end to end, currently sole architect and engineer for a manufacturing enterprise's entire AWS data estate. Defines target-state data architecture and implements it personally in Spark (PySpark) and Databricks: Kimball dimensional models, Bronze/Silver/Gold Lakehouse design, and governed data products across Sales, Procurement, Finance, and Operations. Evaluates architectures for 100+ external teams as a hackathon judge. Comfortable as the only technical owner in the room, remote-first, across time zones.

Core Skills

Architecture: Cloud data platform design, Lakehouse (Medallion) architecture, Kimball dimensional modeling, data governance & access control

Languages: Python, SQL, PySpark

Platforms: Apache Spark, Databricks, Delta Lake, AWS (Glue, S3, Redshift), Azure Data Factory

Delivery: Batch & streaming-oriented ETL/ELT, schema validation and drift control, CI-friendly pipeline design

Reporting Layer: Power BI, Tableau, Streamlit

Experience

Data Engineer - Sole Architect & DE

Apr 2026 – Present

Team Computers, embedded at a Speciality Chemical manufacturing enterprise

- Sole technical owner of the client's AWS data architecture: set direction, design pipelines, and implement them personally with no engineering team behind
- Design the target-state Lakehouse (Bronze/Silver/Gold on S3) and dimensional models for Sales, Procurement, Finance, and Operations, treating each domain as a governed data product rather than a one-off extract
- Build ETL/ELT pipelines in Python, SQL, and PySpark against multi-million-row datasets, with schema validation and drift controls built in from the start
- Automated recurring analytics workflows, cutting manual turnaround from days to minutes, while holding the reliability the business runs its daily decisions on

Senior Team Lead - Data Engineering

Aug 2016 – Mar 2026

B&S Group (Gowrie Healthcare Pvt. Ltd.), India - international stakeholders

- Owned end-to-end data architecture and pipeline delivery in Python, SQL, and Databricks for Sales, Procurement, Finance, and Operations, working directly with business stakeholders to turn ambiguous requirements into scalable data models
- Designed and implemented medallion-architecture Lakehouse pipelines over multi-million-row datasets, and integrated Databricks outputs with Power BI for self-service analytics with role-based access
- Built quality controls and schema validation into every pipeline to prevent data drift and keep downstream reporting reliable
- Automated reporting and analytics workflows, cutting manual effort from days to minutes
- Led a team of 10 analysts, setting the technical direction and driving adoption of Python and SQL engineering practices across the group

Architecture & Data Product Projects

End-to-End Airport Commercial Analytics

AWS Glue, Databricks, PySpark, S3, Redshift

- Designed a multi-tier Bronze/Silver/Gold S3 Lakehouse from scratch and built automated ingest streams via AWS Glue
- Applied Kimball dimensional modeling in PySpark and exposed optimized analytical layers in Redshift, cutting reporting latency from a full week to a daily cycle while holding 99%+ pipeline reliability

Satyadarshi I - Space Data Pipeline

Python, DuckDB, Streamlit, Geospatial Processing

- Architected and automated a Sentinel-2 satellite imagery pipeline computing NDVI vegetation indexes to replace manual tracking of regional agricultural anomalies
- Optimized analytical storage structures to accelerate vector query performance at scale

Community Leadership & Credentials

- **Databricks HackBricks, Architectural Evaluator & Designer:** designed data pipeline and AI challenges and evaluated end-to-end architectures for 100+ teams at Databricks-sponsored events (with MITB ACM and Indian Data Club)
- **GDG Lucknow Agentic Premier League, Hackathon Mentor:** mentored developers on multi-agent system design and orchestration workflows
- **Indian Data Club (IDC), Technical & Support Lead:** lead the Tech & Support division of a national data community; designed the 21-Day SQL Challenge and 14-Day Databricks AI Challenge

Education

Diploma in Mechanical Engineering
Gujarat Technological University

2011 – 2014
